- Cyber Security
- Computer Architecture

Projects

Personal Portfolio Website | *Html, Css, Javascript, Use Google Sheets as a Database*

August 2024

- Built with HTML, CSS, and JavaScript for structure, style, and interactivity. Features like animations, smooth scrolling, and interactive elements enhance the user experience.
- Google Sheets is used as a backend to store project details, form submissions, etc. JavaScript fetches data in real time without needing a complex server setup.
- Content updates are simple; just edit the Google Sheet to update the site. No need to change the code, making it easy to add new projects or update information.

College Gallery | *Html, Css*

June 2024

- This project is a digital gallery that showcases memorable moments from my college events, activities, and celebrations. It is built using pure HTML and CSS.
- The gallery serves as a visual journey through various occasions, capturing the essence of student life, achievements, and special occasions.

Parallax Website | *Html, Css*

March 2024

- This project demonstrates a visually stunning parallax scrolling website, designed using pure HTML and CSS.
- It showcases the smooth integration of various design elements to create a modern, user-friendly interface.
- Parallax Scrolling Effect: Engaging background and foreground motion as users scroll.

Technical Skills

Languages: Java, C++, C, HTML/CSS, JavaScript

Developer Tools: VS Code

Technologies/Frameworks: GitHub, Tailwind, CSS
